## PERTH RADIOLOGICAL CLINIC

I.V.U.  
(Intravenous Urogram)  
I.V.P.  
(Intravenous Pyelogram)

## A Guide for Patients

An appointment has been made for you

At: .....

Time: .....

Date: .....

Please bring all your  
previous medical imaging  
studies with you.

If you cannot keep your  
appointment please let us  
know well in advance.

Leaders in Medical Imaging

# I.V.U.

(Intravenous Urogram)

# I.V.P.

(Intravenous Pyelogram)

## What is an I.V.P/I.V.U?

An I.V.P. is an x-ray examination of the urinary tract (kidneys, ureters and bladder). The kidneys, ureters and bladder normally do not show clearly on x-rays. It is necessary to use an Iodine-containing dye (contrast medium) that outlines these structures on the x-ray.

## Preparation

As the bowel shadows may obscure the kidneys, you will be given a diet and tablets to swallow the day before the examination, to help clear the bowel. Food and fluids will usually be forbidden for the six hours before the I.V.P.

### Intravenous Pyelogram

The day before the examination .....

Eat only fish, white bread and dairy products.

**NO** red meat, chicken, vegetables, fruit or salads

**(NO ROUGHAGE)**

**Take 2 (two) tablets before the evening meal**

(they are a laxative)

**Have nothing to eat, drink or smoke from midnight the night before the examination.**

**NOTE:** If your appointment is in the afternoon, you may have a light breakfast of tea and toast before 7.00 am and then nothing to eat, drink or smoke.

## During the I.V.P.

After a preliminary x-ray is taken, a small needle will be put into a vein in the arm and contrast medium injected. This will give you a warm feeling all over your body and perhaps a metallic taste in your mouth.

Further x-rays will be taken during the next 30 minutes (sometimes longer, depending on the problem).

It may be necessary to apply an abdominal binder for compression for approximately 5-10 minutes. This is rarely uncomfortable and is avoided in painful conditions.

After the examination you should be able to resume your normal activities

## How long will the procedure take?

The procedure will take approximately 1 1/2 hours, or longer if "delayed films" are required.

The radiologist will examine your films and send a report to your referring doctor.

## Please note

- (a) If you know that you have a history of allergy to Iodine please tell the Radiographer or Radiologist before the examination.
- (b) If you are a woman of child-bearing age and there is a possibility that you may be pregnant, please bring this to the attention of the radiology staff before the examination.
- (c) If you are breast feeding please inform our staff.

**If you have any questions regarding the procedure please contact us or speak to your doctor.**

**Please bring any previous x-rays with you on the day of your examination.**

## The Perth Radiological Clinic Difference

- 15 convenient locations
- Caring, helpful and professional staff
- State-of-the-art diagnostic equipment
- Over 40 specialist radiologists trained to provide you with accurate and reliable reports
- World class digital image networking between clinics provides the benefit of second opinions from specialist radiologists no matter which of our clinics you attend.
